Home Trial Support

Delivering clinical trials to patients, wherever they live.

Challenge 1: On average, 20% of patients drop out of clinical trials.

Challenge 2: Only 25% of global trial participants are people of color.

Challenge 3: On average, recruitment is 32% of the overall trial budget.

SOLUTION

Build a more efficient trial through solutions that make participation easier and keep patients engaged.

Make participation more convenient by bringing the trial closer to the patient, running the trial at a local site and conducting visits in the home or other convenient location. This can accelerate overall trial timelines by speeding up recruitment and improving retention.

USING HOME TRIAL SUPPORT

Home Trial Support removes participation barriers by bringing your trials to patients where they live, creating convenience, comfort, and flexibility that results in **faster recruitment and better retention.**

MRN's global network of licensed, highly skilled healthcare professionals, conduct everything from patient training and vital sign assessments to complex study drug administration, biological sample collection and blood draws.

110,000+

Home visits delivered to **patients in their own communities**

50-100%

Patient **recruitment increase per site**

95+%

Average **patient retention** rate, keeping more patients in their trial

BREAKING DOWN PARTICIPATION BARRIERS

Keeping the patient at the heart of research

Our Home Trial Support (HTS) service breaks down the barriers which deter patient participation.

Patients report the following as their greatest challenges:

- travel due to disease state or distance from site
- being unable to take time off work or find childcare
- needing / preferring the added safety and reduced exposure
- the convenience of being at home.

Supporting Sites & Sponsors

HTS creates more efficient trials by removing rate limiting barriers. This results in:

- increased enrollment and retention rates
- broadening of the “real-world” mix of participants
- improved compliance - getting better data, faster.

HTS DELIVERED BY MRN CLINICAL EXPERTS

MRN healthcare providers are experts in their field and are able to offer a range of in-home / alternative locations services. These include bit are not limited to:

- Blood sampling
- Centrifugation
- Self administration training
- AE capture/injection site reaction assessment
- Concomitant medication capture
- Nasal/Wound swabs
- Line care
- Physical assessments
- IMP administration
- IV/IM/SC
- IMP reconstitution
- IMP receipt
- PK draws
- IMP storage management
- ECGs
- Spirometry

HOW WE DO IT

Our patient-centric approach to clinical visits and highly skilled healthcare professionals (HCPs) means that we can work across all phases and disease indications.

Keeping patients safe is our top priority.

- All HCPs are carefully selected and approved by MRN and the Principal Investigator
- Each HCP completes MRN provided comprehensive, protocol-specific training

While our healthcare professionals are in the field caring for patients and obtaining valuable data, our project management team expertly manage the simple or complex and have robust processes to ensure we deliver visits safely and accurately. MRN's quality team is dedicated to ensuring all clinicians understand and adhere to the regulations across any country or region we are providing care.

MRN healthcare professionals perform direct source data capture in the home, that can be delivered into the site's EDC system. Seamless data collection is provided by our regulatory-approved and validated digital eSource systems. These systems are:

- integrated across all MRN solutions
- capture robust and integrated data from any location
- designed to provide simplified processes for sites and patients.

The study PI will still retain full oversight of the study, patients and in-home healthcare providers, but without the additional administrative and management burdens.

Our collaboration and relationship with sites ensures successful delivery. We collaborate with sites from the start of each project and require attendance at investigator meetings to maximize site uptake.

MRN's technology tools **improve patient compliance,** extend the range of assessments that can be completed in the home, **provide a communication platform for physicians and patients**, open capabilities for additional physician oversite, create a unified data collection platform, and **provide more complete and accurate data.**

We also prioritize keeping patient data safe. MRN is ISO27001 & ISO 9001:2015 accredited. We maintain a high standard of data handling in line with ICH GCP and GDPR.

CAPABILITIES IN 60+ COUNTRIES

We work around the world with ease. By using our own teams of professionals supplemented with long term and valued partners, we act as a single, centrally managed provider with delivering locally on a global scale.

Our International Development office and vendor management team are constantly looking for new ways to expand our services and deliver trials to patients while maintaining our high level of standardization and quality.
